It is a simple and often humorous overview that doesn’t provide depth in one area.

**Dreamers, Discoverers and Dynamos (formerly titled "The Edison Trait") by Lucy Jo Palladino**
This is without a doubt the book that helped me understand and create some harmony with our dynamo, discoverer and now dreamer combo highly gifted son...it also helped us develop a better way to guide him. It is exceptionally helpful in learning methods for disciplining and managing your gifted child—when traditional ways aren't effective, this book has the ones that work--specifically for gifted; also has sections on Twice Exceptional.

**How the Gifted Brain Learns by David Sousa**
This is a remarkable book for both teachers and parents of gifted children. It pulls together many areas of gifted research, knowledge and applications in a clear and concise manner. It includes ways to meet the needs of all types of gifted learners. This is a one-stop book for teachers who have high-ability/gifted students in a classroom and need to understand how these students' brains work and how to plan effective instruction.

**Keys to Parenting the Gifted Child by Sylvia Rimm**

This book answers some common questions parents of gifted children have, questions like "How hard and how far should I push my child?"; covers characteristics and behaviors at school and how to handle them; providing suggestions on how to work successfully for your child with teachers, school boards, and even state legislators.
